

# PROTECTIVE INTELLIGENCE

Our protective intelligence services are devoted to providing a proactive analysis of a company's risks, threats, and vulnerabilities.

This is done through preemptive research by our experts using programs and open-source processes to identify risks and threats, while providing appropriate mitigation techniques to lessen the likelihood of an event. Protective intelligence is not only a critical foundational aspect of any good security program, but it enhances other security tools that companies are already employing.

## Our Services Include:

### Protective Intelligence

Threat actors are consistently looking for opportunities to stage their next criminal act. Freedom Consulting will locate any security gaps and assist companies with remedying them.

### Persistent Monitoring

These services are conducted by experts within our company's Intelligence Department. All information is ethically gathered through open-source processes, protecting the Client from any legal risk.

### Breach Exposure Services

Our Breach Exposure Services involve searching for breached data that could be exposed on the open, dark, and/or deep web. This data can be accessed by criminal persons for use or sale.

### Due Diligence Services

Continued Due Diligence Services arm you and your company with information when it is most important, providing "peace of mind" when making important business decisions.

### Social Media Risk Mitigation

This training is optimal for any employee related to the company online. Appropriate social media practices are instrumental in maintaining a positive reputation and protecting company assets.

### Employee Screening Services

Like the Due Diligence service, this service allows future employers to gain better insight on applicants. Employee screenings are like a typical background check but include social media awareness insight.
